Kepler - SQL Query Fields | Grids & Dashboards Documentation

Overview

Ever wanted a simple way to query a database quickly and efficiently and display extracted data with different shapes !

Now, you can do it easily with **Kepler - SQL Query Fields | Grids Dashboards Plugin**.

The **Kepler - SQL Query Fields | Grids Dashboards plugin** is an app developed by Kepler Technologies to help you getting new ways to display data from your external databases quickly and efficiently in jira.

Kepler - SQL Query Fields | Grids Dashboards is an application that helps you to integrate and query external data sources and retrieve dynamic informations from external databases automatically.

You can easily combine and manage data from multiple systems into one highly customizable table grid. Users can then update their external data directly from Jira.

With **Kepler - SQL Query Fields | Grids Dashboards app** , you are able to

1. Display your data in :
    - Autocomplete field.
    - Select field.
    - Table.
    - Chexbox.
    - Radio button.
2. View Table.
3. Edit table
4. Export data to CSV.

Download the latest version

Kepler - SQL Query Fields | Grids Dashboards app actually is available for **Jira Server** version and **Jira Service Desk** in **English** and **French**.
